DATA & ANALYTICS LEAD | SQL | DATA MODELING | PYTHON | PMP | SIX SIGMA

Data and analytics professional specializing in SQL, data modeling, and building structured datasets for decision support and analytics workflows. Experienced in translating business requirements into metrics, dashboards, and data pipelines across enterprise systems.

PROFESSIONAL EXPERIENCE

Freelance | Project Manager

Metro Manila | Jun 2022 – Present

- Led cross-functional projects across operations and software using hybrid Agile/Waterfall methodologies.

Blaine Corp | Operations Manager

Carmona, Cavite | Jul 2019 – Feb 2023

- Built and deployed analytics-driven reporting and data pipelines using SQL and VBA, reducing manual reporting time and enabling near real-time decision support.
- Led digitization of legacy workflows beyond SAP by designing SQL-backed data pipelines, analytics tools, and web applications to support planning and reporting.
- Acted as product owner for 60+ transformation and continuous improvement initiatives, translating operational requirements into structured backlogs, data models, and measurable outcomes.

Blaine Corp | Planner & PMO Lead

Philippines | March 2018 - July 2019

- Led PMO setup and SOP redesign; optimized MRP planning to address supply gaps, improving alignment between demand, inventory, and operational execution.

YSS Labs (Cathay Drug) | R&D Staff

Philippines | Jun 2016 – Mar 2017

EDUCATION

MSc Business Analytics — National University of Singapore | August 2025- December 2026

- **Achieved 3rd place (2nd Runner-Up) in the NUS–SYNAPXE–IMDA AI Innovation Challenge 2026 . Led product structuring and solution design for a healthcare AI system using agent-based architecture, retrieval-augmented generation (RAG), and structured data pipelines to generate context-aware medical insights.**

BS Chemical Engineering — Saint Louis University, Baguio | June 2013 - June 2017

MsBA Projects:

- Built an end-to-end analytics pipeline for a property valuation system using Python and SQL, including data preprocessing, feature engineering, and model evaluation. Structured datasets and metrics for analysis, benchmarking Ridge, Random Forest, and XGBoost, and selected Random Forest based on generalization performance (MAE ~\$153K, $R^2=0.888$). Implemented a modular agent-based pipeline where data preparation, model training, and evaluation were handled as structured components for scalable inference workflows.
- Worked on a Tour de France data project where I cleaned and structured rider, team, and stage data using SQL and Power BI. Designed the database using 3NF and star schema, and built queries to turn the data into usable metrics for dashboards.
- Built a portfolio optimization pipeline using 30 years of returns from 43 industry portfolios, applying MPT and CAPM with shrinkage to construct and combine EWP, GMV, and Tangency portfolios, optimizing for Sharpe ratio and achieving more stable out-of-sample performance.

CERTIFICATIONS

- PMP — PMI | Apr 2023
- Lean Six Sigma Yellow Belt — AIGPE | May 2024

SKILLS

SQL, Python, data modeling (3NF, star schema), data pipelines, APIs, Power BI, EDA, metrics design, agent-based workflows, SAP ERP, dashboarding
